2 Text Extraction and Summarization: Text classification in a hierarchical mixture model

for small training sets

Kristina Toutanova, Francine Chen, Kris Popat, Thomas Hofmann

October 2001 Proceedings of the tenth international conference on Information and knowledge management

Publisher: ACM Press

Full text available: pdf(1.40 MB)

Additional Information: full citation, abstract, references, citings, index

Documents are commonly categorized into hierarchies of topics, such as the ones maintained by Yahoo! and the Open Directory project, in order to facilitate browsing and other interactive forms of information retrieval. In addition, topic hierarchies can be utilized to overcome the sparseness problem in text categorization with a large number of categories, which is the main focus of this paper. This paper presents a hierarchical mixture model which extends the standard naive Bayes classif ...

Multimedia Applications of Multiprocessor Systems-on-Chips

Wayne Wolf

March 2005 Proceedings of the conference on Design, Automation and Test in Europe - Volume 3

Publisher: IEEE Computer Society

Full text available: pdf(83.35 KB) Additional Information: full citation, abstract

This paper surveys the characteristics of multimedia systems. Multimedia applications

today are dominated by compression and decompression, but multimedia devices must also implement many other functions such as security and file management. We introduce some basic concepts of multimedia algorithms and the larger set of functions that multimedia systems-on-chips must implement.

4 Fine-Grained Dynamic Voltage and Frequency Scaling for Precise Energy and Performance Trade-Off Based on the Ratio of Off-Chip Access to On-Chip Computation Times

Kihwan Choi, Ramakrishna Soma, Massoud Pedram

February 2004 Proceedings of the conference on Design, automation and test in **Europe - Volume 1**

Publisher: IEEE Computer Society

Full text available: pdf(757.37 KB) Additional Information: full citation, abstract, citings, index terms

This paper presents an intra-process dynamic voltage and frequency scaling (DVFS) technique targeted toward non real-time applications running on an embedded system platform. The key idea is to make use of runtime information about the external memory access statistics in order to perform CPU voltage and frequency scaling with the goal of minimizing the energy consumption while translucently controlling the performance penalty. The proposed DVFS technique relies on dynamically-constructed regres ...

Palmer, Marti A. Hearst June 1997 Computational Linguistics, Volume 23 Issue 2 Publisher: MIT Press Full text available: pdf(1.77 MB) Additional Information: full citation, abstract, references, citings Publisher Site The sentence is a standard textual unit in natual language processing applications. In many language the punctuation mark that indicates the end-of-sentence boundary is ambiguous; thus the tokenizers of most NLP systems must be equipped with special sentence boundary recognition rules for every new text collection. As an alternative, this article presents an efficient, trainable system for sentence boundary disambiguation. The system, called Satz, makes simple estimates of the parts of speech of ... Verbs semantics and lexical selection Zhibiao Wu, Martha Palmer June 1994 Proceedings of the 32nd annual meeting on Association for Computational Linguistics Publisher: Association for Computational Linguistics Full text available: pdf(585.30 KB) Additional Information: full citation, abstract, references, citings Publisher Site This paper will focus on the semantic representation of verbs in computer systems and its impact on lexical selection problems in machine translation (MT). Two groups of English and Chinese verbs are examined to show that lexical selection must be based on interpretation of the sentences as well as selection restrictions placed on the verb arguments. A novel representation scheme is suggested, and is compared to representations with selection restrictions used in transfer-based MT. We see our ap ... 3 An Introduction to Rlab Ian Searle June 1996 Linux Journal Publisher: Specialized Systems Consultants, Inc. We have developed an algorithm for constructing efficient dispatch functions that combines novel algorithms for efficient single dispatching, multiple dispatching, and predicate dispatching. Our algorithm first reduces methods written in the general predicate dispatching model (which generalizes single dispatching, multiple dispatching, predicate classes and classifiers, and patter ... Analysis of the HDAF for interpolation and noise suppression in volume rendering Kristoffer Andersson, Ioannis A. Kakadiaris, Manos Papadakis, Donald J. Kouri, David K. May 2003 Proceedings of the symposium on Data visualisation 2003 VISSYM '03 Publisher: Eurographics Association Full text available: pdf(991.89 KB) Additional Information: full citation, abstract, index terms In this paper, we evaluate the HDAF (Hermite Distributed Approximating Functionals) family of interpolation and derivative functions, with respect to their accuracy for reliable volume rendering, and compare them with other interpolation and derivative estimation filters. We utilize several different evaluation methods, both analytical and experimental. The former includes the order of decay of the global error, the local spatial error, and the behavior of the filters in the frequency domain. In ... 8 Paper session 5: approximate and ranked query processing: Content and structure in indexing and ranking XML Felix Weigel, Holger Meuss, Klaus U. Schulz, François Bry June 2004 Proceedings of the 7th International Workshop on the Web and Databases: colocated with ACM SIGMOD/PODS 2004 WebDB '04 Publisher: ACM Press Full text available: 📆 pdf(320.32 KB) Additional Information: full citation, abstract, references Rooted in electronic publishing, XML is now widely used for modelling and storing structured text documents. Especially in the WWW, retrieval of XML documents is most useful in combination with a relevance-based ranking of the query result. Index structures with ranking support are therefore needed for fast access to relevant parts of large

	Publisher: MIT Press Full text available: pdf(203.03 KB) Additional Information: full citation, abstract, citings	
	We implemented versions of the SVM appropriate for <i>one-class</i> classification in the context of information retrieval. The experiments were conducted on the standard <i>Reuters</i> data set. For the SVM implementation we used both a version of Schoelkopf et al. and a somewhat different version of one-class SVM based on identifying "outlier" data as representative of the second-class. We report on experiments with different kernels for both of these implementations and with different represe

•	detecting network intrusions R. Sekar, A. Gupta, J. Frullo, T. Shanbhag, A. Tiwari, H. Yang, S. Zhou November 2002 Proceedings of the 9th ACM conference on Computer and communications security Publisher: ACM Press	_
	Full text available: pdf(127.45 KB) Additional Information: full citation, abstract, references, citings, index terms	
	Unlike signature or misuse based intrusion detection techniques, anomaly detection is capable of detecting novel attacks. However, the use of anomaly detection in practice is hampered by a high rate of false alarms. Specification-based techniques have been shown to produce a low rate of false alarms, but are not as effective as anomaly detection in detecting novel attacks, especially when it comes to network probing and denial-of-service attacks. This paper presents a new approach that combines

	This paper presents a brief introduction to architectures and technologies that probably will be used for wide-area communications. It starts with a review of the structure of today's network and some aspects of the <i>digital transmission</i> systems that dominate modem networks. Then the status and trends in wide-area transmission technology are addressed, first for the <i>backbone network</i> and then for the <i>local access network</i> . Local access refers to the transmission systems which c

	Interactive multimedia learning systems are not suitable for people with disabilities. They tend to propose interfaces which are not accessible for learners with vision or auditory disabilities. Modeling techniques are necessary to map real world experiences to virtual worlds by using 3D auditory representations of objects for blind people and visual

In this paper we describe common aspects and differences in the process of modeling the real world for application ... Keywords: modeling methodologies, sensory disabilities, tutoring systems, user adapted interfaces 13 Synthesis of reusable DSP cores based on multiple behaviors Wei Zhao, Christos A. Papachristou January 1997 Proceedings of the 1996 IEEE/ACM international conference on Computer-aided design Publisher: IEEE Computer Society Full text available: pdf(269.88 KB) Additional Information: full citation, abstract, references, citings, index Publisher Site Design with cores has become popular recently because it can decrease the design time and ease'the complexity of the design process. This paper presents a new method for the design of DSP cores based on multiple behaviors. This method uses redesign technique based on reallocation transformations to extract those RTL components in an initial RTL structure which are highly reusable and uses them to construct a DSP core. Experimental results are provided to illustrate the high reusability of core, ... Keywords: RTL components, RTL structure, design process complexity, design time, digital signal processing chips, multiple behaviors, reusable DSP cores synthesis 14 Song of the whale: parallel processing using APL2 Per Gjerløv, Izabela Meisel June 1996 ACM SIGAPL APL Quote Quad, Proceedings of the conference on Designing the future APL '96, Volume 26 Issue 4 Publisher: ACM Press Full text available: pdf(707.25 KB) Additional Information: full citation, abstract, references, index terms APL2 has often been used in a credit course at the Technical University of Denmark. The objective of the course exercise has been to analyze the vocalizations of Sperm Whales. In January 1996 the course was run again, this time using the IBM SP/2 supercomputer to solve the problem, and in this course an additional objective was to utilize the possibilities of this powerful parallel computer. During the three weeks of the course the students learned the APL language, solved a non-trivial problem, ... 15 Towards a Model for Hardware and Software Functional Partitioning Frank Vahid, Thuy DM Le March 1996 Proceedings of the 4th International Workshop on Hardware/Software Co-Design Publisher: IEEE Computer Society Full text available: pdf(914.27 KB) Additional Information: full citation, abstract, citings Publisher Site We describe a model that supports the functional partitioning of a system-level functional specification among hardware and software components. The model includes only the information needed by partitioning, and thus can be communicated freely and generated automatically. Based on characteristics of several real examples, we describe a technique for automatically generating generic model instances, on which partitioning heuristics can be applied and fairly compared. Such comparisons will become ... 16 System architectures for computer music John W. Gordon June 1985 ACM Computing Surveys (CSUR), Volume 17 Issue 2 Publisher: ACM Press

Sekar, A. Gupta, J. Frullo, T. Shanbhag, A. Tiwari, H. Yang, S. Zhou November 2002 Proceedings of the 9th ACM conference on Computer and communications security **Publisher: ACM Press** Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> Full text available: pdf(127.45 KB) Unlike signature or misuse based intrusion detection techniques, anomaly detection is capable of detecting novel attacks. However, the use of anomaly detection in practice is hampered by a high rate of false alarms. Specification-based techniques have been shown to produce a low rate of false alarms, but are not as effective as anomaly detection in detecting novel attacks, especially when it comes to network probing and denial-ofservice attacks. This paper presents a new approach that combines ... **Keywords**: anomaly detection, intrusion detection, network monitoring ² Analog State Transmission with Digital Hardware J. T. Marienborg, T. S. Lande January 2000 Analog Integrated Circuits and Signal Processing, Volume 22 Issue 1 Publisher: Kluwer Academic Publishers-Full text available: Publisher Site Additional Information: full citation, abstract, references, index terms-A novel strategy for analog state transmission providing a large number of analog channels is presented. The total bandwidth of a digital asynchronous bus is dynamically divided by a large number of separate channels using relatively simple modulation and arbitration circuitry. The concept introduces several interesting aspects like random quantization noise, good scaling capabilities and low area consumption. The feasibility of the method has been proven by measurements on a working chip imp ...

	The speed of message dispatching is an important issue in the overall performance of object-oriented programs. We have developed an algorithm for constructing efficient dispatch functions that combines novel algorithms for efficient single dispatching, multiple dispatching, and predicate dispatching. Our algorithm first reduces methods written in the general predicate dispatching model (which generalizes single dispatching, multiple dispatching, predicate classes and classifiers, and patter

We implemented versions of the SVM appropriate for one-class classification in the context of information retrieval. The experiments were conducted on the standard Reuters data set. For the SVM implementation we used both a version of Schoelkopf et al. and a somewhat different version of one-class SVM based on identifying "outlier" data as representative of the second-class. We report on experiments with different kernels for both of these implementations and with different represe ...

	A computer program library is essentially a "job shop" which accepts and processes requests for computer programs. Such processing usually results in an initial delivery of the program package to the requestor, followed later by deliveries of maintenance packages to him. Packages usually consist of documentation and machine readable material (cards, tapes, disks, etc.). The latter is prepared on data processing equipment installed in the shop. Simulation of

	The economics of storing, organizing, and interrogating the ever-increasing data bases that computer users have to deal with dictates the use of large computers located alongside tape libraries that store the data. Such computers and libraries will necessarily serve a large population of widely scattered users. Moreover, many of the users may not be trained as computer programmers and their interests may not lie in the area of techniques of man-machine communications. Such an inc

	Rooted in electronic publishing, XML is now widely used for modelling and storing	
	structured text documents. Especially in the WWW, retrieval of XML documents is most useful in combination with a relevance-based ranking of the query result. Index structures with ranking support are therefore needed for fast access to relevant parts of large document collections. This paper proposes a classification scheme for both XML ranking models and index structures, allowing to determine which index suits w
